📞 515-337-5710 ✉️ lauren030109@gmail.com 💻 <https://www.linkedin.com/in/lauren-kwon01/>

Education

Iowa State University

Bachelor of Science in Computer Science (GPA: 3.90 / 4.00), Minor in Statistics

Expected Dec 2026

Ames, Iowa

Technical Skills

Languages: Java, C, C++, Python, SQL, R, SAS, JMP

APIs & Backend: GraphQL, Spring Boot, WireMock, Postman, Insomnia

Developer Tools: Git, IntelliJ IDEA, Android Studio, Jira

Build & DevOps: Maven, Jenkins, Rundeck

Job Experience

Garmin

May 2026 – Aug 2026

Software Engineer Intern - Fitness API, Active Intelligence team

Olathe, Kansas

- Implemented and validated 34+ GraphQL query variants in a Java 21/Spring Boot service for Garmin Connect Active Intelligence, consolidating fitness and wellness data into a consistent API powering AI-generated fitness messages.
- Built contract-driven GraphQL schemas and reactive resolver pipelines to expose high-value metrics safely and reliably, backed by end-to-end WireMock unit tests, fixture based validation, and strict response assertions.
- Used GraphiQL to validate GraphQL queries and response accuracy against Garmin Connect test and production data, catching environment specific contract and data-quality issues before release.

Research Experience

University of Missouri Consumer Networking Technologies

May 2025 – July 2025

NSF REU Research Intern - National Science Foundation Research Experiences for Undergraduates

Columbia, Missouri

- Built InfectPrompt, a framework that injects realistic vulnerabilities into 218K+ real-world C/C++ functions using LLMs (DeepSeek-Coder), producing a filtered, validated dataset of 19,784 semi-synthetic vulnerable samples.
- Trained and evaluated a Graph Neural Network on Code Property Graph representations, showing synthetic data augmentation improved real-world generalization by +1.3pp accuracy and +2.5 F1 over training on real data alone.
- Designed a multi-stage filtering pipeline (syntax validation, static analysis cross-checks via Cppcheck/Flawfinder) to ensure vulnerability quality, achieving 58–64% sample retention across CWE categories.
- Co-authored and presented findings at the 2025 REU Symposium on Big Data, co-located with IEEE ICDM 2025; open-sourced code at github.com/sqam-lab/ResourceVul.

CS192: Explorations in Computing Research

Spring 2024

Undergraduate Researcher

Ames, Iowa

- Filtered and analyzed 9,000+ chart images from the PlotQA dataset, designing a normalized error metric to evaluate vision-language model accuracy (DePlot, MatCha).
- Found model error rates increased up to 12x on high-digit-count graphs, isolating training-data imbalance as the root cause; co-authored technical report, later extended by a graduate researcher in the lab.

Projects

Study Buddy Android Application | Group Project | Android Studio, Java, Volley, Spring Boot, MySQL

Spring 2025

- Directed frontend development for a team of four, building a Java Android application with WebSocket-driven real-time polls, group chat, and interactive study features.
- Developed event management and scheduling features enabling students to create, modify, and RSVP to study sessions, integrating RecyclerView interfaces with REST APIs for dynamic event data.
- Implemented JSON-based API integration and persistent user/group state with SharedPreferences, while writing unit and integration tests for RSVP flows, chat, and scheduling conflicts.

Leadership & Activities

Google Developer Student Club - Technical Skills Development Chair

Sep 2024–May 2025

STEM Scholars / Graduation Plus - Member

Oct 2024–Present

Friley Hall Hutton House Cabinet – Treasurer

Sep 2024–May 2025
